

Guy Sela

The Essentials of **WATER TREATMENT**

About the Author

Guy Sela was born in 1973, in Rehovot, one of the first agricultural towns in Israel. Mr. Sela graduated, with a BSc. degree from the Hebrew University as an agronomical engineer and studied chemical engineering in Shenkar college.

His work in large scale, nationally and internationally, enabled him to plan and lead water treatment projects.

Guy spent many years researching and experimenting ways to improve water treatment processes, mainly for agricultural use.

In 2018 Guy established Cropaia, an ag and water consulting firm, dedicated to water and agriculture knowledge dissemination .

Guy Sela is an internationally renowned speaker in in conferences, symposiums, and online webinars, which are brought to thousands of water professionals, has allowed him to share his knowledge, expertise world-wide.

Table of Contents

| | |
|---|-----------|
| WATER USAGE AND RESOURCES | 1 |
| What do we use water for? | 1 |
| How much water do we consume? | 2 |
| The available water resources..... | 2 |
| The hydrological cycle..... | 3 |
| Surface water and groundwater..... | 3 |
| Alternative water sources | 5 |
| WATER QUALITY PARAMETERS | 7 |
| How is water quality determined? | 7 |
| Parameters and indices..... | 8 |
| PROPERTIES OF DIFFERENT WATER SOURCES..... | 17 |
| Properties of groundwater | 17 |
| Properties of surface water..... | 18 |
| Water pollution sources | 18 |
| Properties of wastewater | 20 |
| WATER QUALITY CRITERIA | 22 |
| How are water quality criteria determined? | 22 |
| Quality criteria for drinking water | 23 |
| Secondary standards..... | 24 |
| Terms used in water quality standards | 25 |
| Quality criteria for irrigation water | 25 |
| Criteria for wastewater reuse..... | 28 |
| PREFACE TO WATER TREATMENT | 29 |
| The multiple barrier approach..... | 29 |
| Basic processes in water treatment | 30 |
| Chapter 2 | 32 |
| FILTRATION | 32 |
| FILTRATION MECHANISMS | 33 |
| Straining | 34 |
| Sedimentation | 34 |
| Inertial impaction | 35 |
| Interception | 35 |
| Adsorption and adhesion..... | 36 |
| Biological removal | 36 |
| TYPES OF FILTERS | 37 |
| Slow sand filtration (SSF) | 37 |

| | |
|---|-----------|
| Rapid sand filtration (RSF) | 44 |
| Slow sand filtration versus rapid sand filtration | 50 |
| Chapter 3 | 51 |
| COAGULATION AND FLOCCULATION..... | 51 |
| INTRODUCTION | 52 |
| The stability of colloidal systems..... | 54 |
| Coagulation mechanisms | 55 |
| Coagulants | 59 |
| How to choose a coagulant? | 60 |
| The jar test | 61 |
| Rapid mixing..... | 61 |
| Flocculation | 64 |
| Slow mixing | 64 |
| Design considerations | 65 |
| Chapter 4 | 67 |
| WATER SOFTENING..... | 67 |
| Why remove hardness?..... | 68 |
| CHEMICAL PRECIPITATION..... | 69 |
| Types of lime..... | 69 |
| Chemistry of lime softening | 70 |
| Recarbonation..... | 71 |
| Treatment configurations..... | 72 |
| Advantages | 74 |
| Disadvantages..... | 74 |
| ION EXCHANGE | 76 |
| Applications in water and wastewater treatment | 76 |
| Advantages | 76 |
| Principles of ion exchange..... | 76 |
| The resin | 78 |
| The selectivity coefficient..... | 80 |
| Exchange capacity | 81 |
| Hardness removal | 82 |
| Design parameters | 82 |
| Regeneration..... | 84 |
| Stabilization..... | 85 |
| Fouling and breakdown | 85 |
| Chapter 5 | 86 |

| | |
|---|------------|
| MEMBRANE PROCESSES..... | 86 |
| Types of membrane processes..... | 87 |
| Flow types | 88 |
| Flow configurations..... | 91 |
| The membranes | 91 |
| Membrane modules..... | 92 |
| Membrane fouling..... | 96 |
| REVERSE OSMOSIS | 98 |
| Configuration..... | 99 |
| RO membranes | 100 |
| Silt Density Index (SDI) | 102 |
| Performance parameters..... | 102 |
| Potential problems..... | 106 |
| Pretreatment..... | 107 |
| Operation and maintenance | 108 |
| Chapter 6 | 110 |
| DISINFECTION..... | 110 |
| Principles of water disinfection | 111 |
| Chick's Law and Chick-Watson model..... | 112 |
| The Ct concept..... | 113 |
| Primary and secondary disinfection | 115 |
| Disinfection byproducts (DBPs) | 116 |
| Regulated disinfection by-products | 118 |
| Disinfection with chlorine..... | 118 |
| Sodium hypochlorite - NaOCl | 119 |
| Calcium hypochlorite – Ca(OCl) ₂ | 119 |
| Chlorine gas Cl ₂ | 120 |
| Chlorine reactions in water | 121 |
| Breakpoint chlorination | 122 |
| Formation of chloramines (combined chlorine) | 123 |
| Primary disinfection with chloramines..... | 123 |
| Dechlorination | 124 |
| Disinfection with chlorine dioxide | 124 |
| On-site options for generation of chlorine dioxide: | 124 |
| UV (Ultraviolet) disinfection | 125 |
| UV lamps | 128 |
| Low-pressure lamps vs. Medium-pressure lamps..... | 129 |

| | |
|--|------------|
| Chapter 7 | 132 |
| ACTIVATED CARBON..... | 132 |
| Principles..... | 133 |
| Applications..... | 133 |
| Factors that affect the adsorption | 134 |
| Properties of activated carbon | 134 |
| Properties of the adsorbate | 138 |
| Process conditions | 139 |
| Activation | 139 |
| Forms of activated carbon | 140 |
| Design parameters..... | 141 |
| Hydraulic loading rate..... | 141 |
| Empty Bed Contact Time (EBCT) | 142 |
| The mass transfer zone (MTZ) | 142 |
| Operation of GAC filters | 143 |
| Absorption Isotherms..... | 143 |
| Competitive adsorption..... | 147 |
| Pilot plant | 147 |
| Dechlorination using activated carbon | 148 |
| Chapter 8 | 149 |
| WASTEWATER TREATMENT | 149 |
| The wastewater treatment | 150 |
| Preliminary treatment | 150 |
| Bar screens | 150 |
| Comminutors and grinders | 151 |
| Grit removal..... | 151 |
| Skimming tanks | 157 |
| Primary treatment | 157 |
| The primary sedimentation tank (Clarifier) | 157 |
| The secondary treatment | 159 |
| Activated sludge | 159 |
| Configurations of activated sludge..... | 159 |
| Terms and design parameters..... | 160 |
| Membrane bioreactors (MBR) | 164 |
