About the Author

Guy Sela was born in 1973, in Rehovot, one of the first agricultural towns in Israel. Mr. Sela graduated, with a BSc. degree from the Hebrew University as an agronomical engineer with specialization and expertise in irrigation, fertilization and water treatment.

His work in large scales, nationally and internationally, enabled him to lead comprehensive research programs on crop nutrition and irrigation using cutting edge agricultural technologies.

His specialization in plant nutrition is the combination of the vast knowledge in water treatment and agriculture.

Guy Sela observed many growers who mainly rely on trial and error and estimation and past experience. The broad misuse of fertilizers and pesticides is a global phenomenon which results in decreased yields, waste, and damage to crops and the environment. This led him to establish his innovative venture Smart Fertilizer in 2008, Cropaia in 2018 and yieldsApp in 2019, all are start-up companies that are dedicated to innovation in agriculture.

Guy Sela is an internationally renowned speaker in conferences, symposiums and online webinars, which are brought to thousands of growers, has allowed him to share his knowledge, expertise world-wide.
# Table of Contents

Table of Contents ................................................................. 2

Chapter 1 ........................................................................... 5

The Essential Nutrients ................................................... 5

Plant Nutrients - Introduction ........................................ 6

Nitrogen .......................................................................... 9

Potassium ........................................................................ 14

Phosphorus ................................................................. 19

Calcium .......................................................................... 23

Magnesium ................................................................. 26

Sulfur ........................................................................... 29

Iron ............................................................................... 32

Manganese ..................................................................... 36

Zinc .............................................................................. 39

Copper .......................................................................... 42

Boron ............................................................................ 44

Chloride ......................................................................... 47

Silicon ............................................................................ 50

Interpretation of Plant Tissue Analysis ......................... 52

Identification of Nutrient Deficiencies ......................... 55

Mineral Nutrition and Plant Diseases ......................... 58

Chapter 2 .......................................................................... 61

The Irrigation Water ....................................................... 61

Irrigation Water Quality ................................................ 62

The electrical conductivity ............................................. 67

The pH .......................................................................... 70

Water Alkalinity ............................................................ 72

Hardness ........................................................................ 74

Managing Irrigation Water Quality Problems ............... 76

Testing the Irrigation Water ........................................... 77

Chapter 3 .......................................................................... 80

Soils ............................................................................... 80

Soil Fertility .................................................................... 81

Soil Water Content ....................................................... 84

Soil acidity ..................................................................... 86

Soil Salinity .................................................................... 89

Managing soil salinity .................................................... 92
